2. Booking Rules
What We Need:
Admins can skip cooldown if needed (with a reason noted).

- Do you require the ability to skip the cooldown on a room-by-room basis, or should this functionality apply globally?

3. Pricing Rules
What We Need:
Extras (e.g., Item 1: €10, Item 2: €20) with images, optional for users.
PayPal payments include a 3% fee (added to total).

- Do you require the ability to add the extras on a room-by-room basis, or should it be available globally?

5. Notifications
What We Need:
Every transaction sends an invoice to the user (via email).

- Do you have a specific design in mind for the invoice?

How Users Book Rooms

User enters personal details (name, email/phone, optional signup with OTP verification).
-If the user clicks on 'Sign Up with OTP,' should it redirect to a signup page, or should the process continue on the same page?

Form is multi-step for clarity (date/time → extras → details → payment).
- Are you okay with the payment step being on a separate page, meaning the user will be redirected to a new page for payment?

Admin Dashboard
What We Need:
Reports:
Export reports as CSV.
- Could you please specify which data you would like to export exactly?

Access Control:
Admins:
Staff:
- Have you already added staff members, or do we need to create new user roles and assign access?

Will you be providing the design for the frontend booking form and the reports page on the admin side? Also, which type of graph would you like to display for the report data?
